Aurora Operations Handbook

1. Service Availability

Aurora targets 99.9 percent monthly availability for the Business plan. Planned maintenance is excluded from the calculation when customers are notified in advance. The platform team reviews this policy every quarter and publishes changes to all customers through the status page and the monthly newsletter. The platform team reviews this policy every quarter and publishes changes to all customers through the status page and the monthly newsletter.

Maintenance windows

Maintenance happens on Sundays between 02:00 and 04:00 UTC. The platform team reviews this policy every quarter and publishes changes to all customers through the status page and the monthly newsletter.

- Customers receive notice at least 72 hours ahead.
- Emergency fixes may happen at any time.
- Each window is announced on the status page.

2. Incident Response

A critical incident is an event that causes a major disruption to a production service. The platform team reviews this policy every quarter and publishes changes to all customers through the status page and the monthly newsletter. The platform team reviews this policy every quarter and publishes changes to all customers through the status page and the monthly newsletter. The platform team reviews this policy every quarter and publishes changes to all customers through the status page and the monthly newsletter.

Recovery objectives

A recovery time objective describes the target time for restoring a service. The platform team reviews this policy every quarter and publishes changes to all customers through the status page and the monthly newsletter.
